Area Challenges

Universal Concrete is the biggest concreting company in the city.

Oscar and the boys are the best in town, however, they're not the best mathematicians.

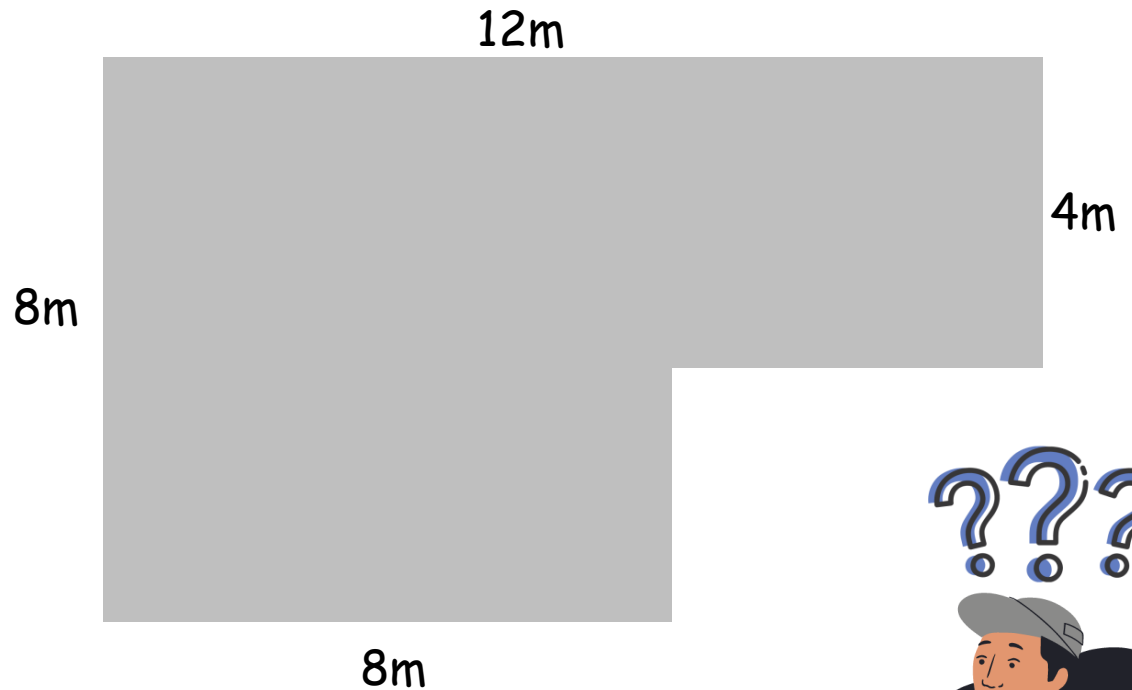

They can't work out how much to charge their clients!

Help them work out the area of each backyard concrete pad and how much they should charge their clients. Add them altogether to find their earnings for the week and then help Oscar pay his workers.

House 1

Cost
\$10 per square meter

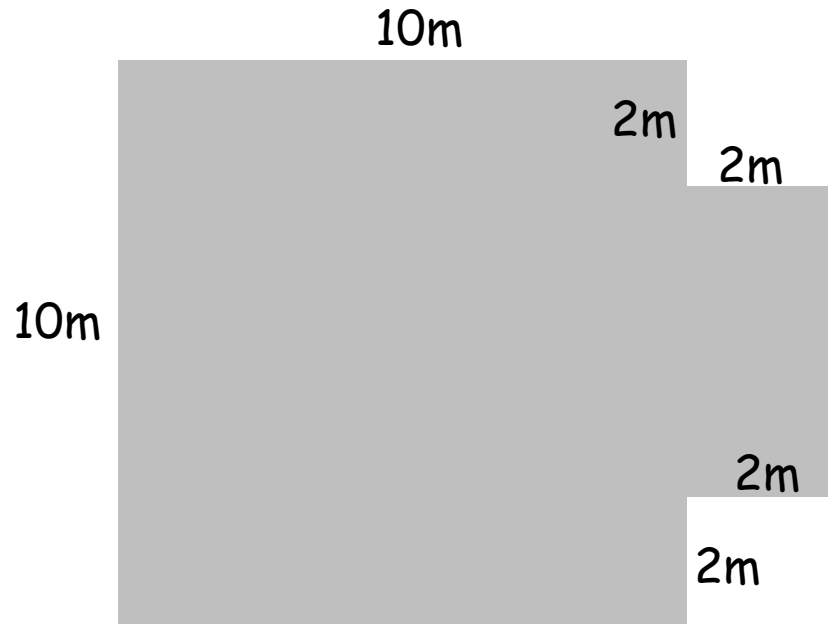

Square Meters = _____

Charge Customer = _____

House 2

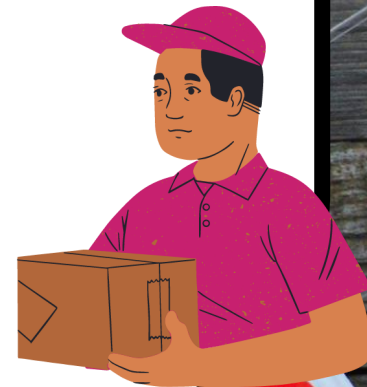

???

Cost
\$8 per square meter

Square Meters = _____

Charge Customer = _____
